Notation	xv
Preface	xxi
1 Introduction	1
1.1 Dimensions and Units	5
1.1.1 Independent Dimensions	5
1.1.2 Common Systems of Units	5
1.1.3 Converting Dimensional Quantities	9
1.2 Definition of a Fluid	12
1.2.1 Simplistic Definition of a Fluid	12
1.2.2 Rigorous Definition of a Fluid	12
1.3 Continuum Approximation	13
1.4 Microscopic and Macroscopic Views	15
1.4.1 Density	15
1.4.2 Temperature	17
1.4.3 Pressure	17
1.4.4 Vapor Pressure	18
1.5 Thermodynamic Properties of Gases	21
1.6 Compressibility	22
1.7 Surface Tension	25
1.8 Viscosity	30
1.9 Examples of Viscosity Dominated Flows	32
1.9.1 Couette Flow	32
1.9.2 Hagen-Poiseuille Flow	34
1.10 Fluid-Flow Regimes	35
1.11 Brief History of Fluid Mechanics	36
Problems	38
2 Dimensional Analysis	51
2.1 Basic Premises	52
2.2 Buckingham II Theorem	55
2.2.1 Finding Dimensionless Groupings	55
2.2.2 Interpretation of Results	60
2.2.3 Nonuniqueness of Results	63
2.2.4 E. S. Taylor's Method	64
2.3 Common Dimensionless Groupings	66

2.4	Dynamic Similitude	67
2.4.1	Similitude for an Airplane	68
2.4.2	Similitude for a Ship	70
	Problems	74
3	Effects of Gravity on Pressure	89
3.1	Pressure on an Infinitesimal Element	89
3.2	The Hydrostatic Relation	92
3.3	Atmospheric Pressure Variation	94
3.4	Manometry	97
3.5	Hydrostatic Forces on Plane Surfaces	99
3.6	Hydrostatic Forces on Curved Surfaces	109
3.7	Equivalent Pressure Fields and Superposition	113
3.8	Buoyancy	115
	Problems	118
4	Kinematics	135
4.1	Eulerian Versus Lagrangian Description	135
4.2	Steady and Unsteady Flows	141
4.3	Vorticity and Circulation	142
4.4	Streamlines, Streaklines and Pathlines	147
4.5	Extensive and Intensive Properties	151
4.6	Surface Fluxes	152
4.7	Reynolds Transport Theorem	154
4.7.1	Finite-Sized Control Volume	154
4.7.2	Differential-Sized Control Volume	158
4.8	Vector Calculus and Multiple Integrals	161
	Problems	164
5	Conservation of Mass and Momentum	175
5.1	Conservation of Mass	176
5.1.1	Integral Form	176
5.1.2	Differential Form	177
5.2	Conservation of Momentum	178
5.2.1	Integral Form	178
5.2.2	Differential Form	179
5.3	Summary of the Conservation Equations	180
5.4	Mass Conservation for Incompressible Flows	181
5.5	Euler's Equation	182
5.5.1	Rotating Tank	184
5.5.2	Galilean Invariance of Euler's Equation	186
5.6	Bernoulli's Equation	188
5.7	Velocity-Measurement Techniques	193
5.7.1	Stagnation Points	193
5.7.2	Pitot Tube	193
5.7.3	Pitot-Static Tube	195
	Problems	197

6	Control-Volume Method	207
6.1	Historical Perspective	207
6.2	Preliminaries	209
6.2.1	Overview of the Method	209
6.2.2	Useful Control-Volume Theorem	213
6.2.3	Fluid Statics Revisited	214
6.3	Mass Conservation Applications	215
6.3.1	Steady Flow in a Pipe	216
6.3.2	Sphere Falling in a Cylinder	218
6.3.3	Deforming Control Volume	222
6.4	Mass and Momentum Conservation Applications	224
6.4.1	Channel Flow With Suction	224
6.4.2	Indirect Force Computation—Rotational Flow	228
6.4.3	Indirect Force Computation—Irrotational Flow	231
6.4.4	Reaction Forces	233
6.4.5	Nonuniform Cross-Sectional Velocity Profiles	236
6.5	Accelerating Control Volume	238
6.5.1	Inertial and Noninertial Coordinate Frames	238
6.5.2	Ascending Rocket	240
	Problems	244
7	Conservation of Energy	271
7.1	Thermodynamics	271
7.1.1	Fundamental Concepts	272
7.1.2	The First Law of Thermodynamics	275
7.1.3	The Second Law of Thermodynamics	275
7.1.4	Combined First and Second Laws	276
7.1.5	The First Law for a Moving Fluid	277
7.2	Integral Form of the Energy Equation	278
7.3	Differential Form for Adiabatic, Inviscid Flow	281
7.4	Entropy Generation	283
7.5	Relation to Bernoulli's Equation	284
7.5.1	Flow of a Liquid	284
7.5.2	Flow of a Gas	285
7.6	Approximate Form of the Energy Equation	287
7.7	Flow in Pipes	291
7.7.1	Friction and Head Loss in Straight Pipes	291
7.7.2	Minor Losses and Non-Circular Cross Sections	296
7.7.3	Multiple-Pipe Systems	306
7.8	Open-Channel Flow	309
7.8.1	Uniform Flow	313
7.8.2	The Equations of Chézy and Manning	315
7.8.3	Surface Wave Speed and Flow Classification	317
7.8.4	Specific Energy	322
7.8.5	Hydraulic Jump	325
	Problems	327

8	One-Dimensional Compressible Flow	347
8.1	Classification	348
8.2	Thermodynamic Properties of Air	349
8.3	Speed of Sound	350
8.4	Subsonic Versus Supersonic Flow	353
8.5	Analysis of a Streamtube	354
8.6	Total Conditions	358
8.7	Normal Shock Waves	360
8.8	Directionality	362
8.9	Laval Nozzle	364
	Problems	371
9	Turbomachinery	381
9.1	Classification	381
9.2	Conservation of Angular Momentum	383
9.2.1	Derivation	383
9.2.2	Lawn Sprinkler	384
9.3	The Euler Turbomachine Equations	386
9.4	Application to a Centrifugal Pump	392
9.4.1	Velocity Triangles	392
9.4.2	Computing Pump Properties	395
9.4.3	Efficiency	397
9.4.4	Performance Curves	398
9.5	Dimensional Considerations	399
9.5.1	Primary Dimensionless Groupings	399
9.5.2	Specific Speed	402
9.6	Common Turbomachines	403
9.6.1	Pumps and Compressors	403
9.6.2	Reaction and Impulse Turbines	406
	Problems	411
10	Vorticity and Viscosity	419
10.1	The Vortex Force	420
10.2	Helmholtz's Theorem and d'Alembert's Paradox	421
10.3	Boundary Conditions at a Solid Boundary	423
10.4	Viscous Effects and Vorticity Generation	424
10.5	Diffusion of Vorticity	427
10.6	Boundary Layers	427
10.7	Lift and Drag of Common Objects	428
	Problems	434
11	Potential Flow	439
11.1	Differential Equations of Motion	440
11.2	Mathematical Foundation	441
11.2.1	Cylindrical Coordinates	442
11.2.2	Velocity-Potential Representation	443
11.2.3	Streamfunction Representation	444
11.3	Streamlines and Equipotential Lines	445
11.4	Bernoulli's Equation	448

11.5	Fundamental Solutions	450
11.5.1	Uniform Flow	450
11.5.2	Potential Vortex	451
11.5.3	Source and Sink	453
11.5.4	Doublet	454
11.5.5	Comments on the Use of Fundamental Solutions	458
11.6	Flow Past a Cylinder	460
11.6.1	The Basic Solution	460
11.6.2	Force on the Cylinder	463
11.6.3	Adding a Vortex	466
11.6.4	Force Computation Redone	468
11.7	Other Interesting Solutions	472
11.7.1	Accelerating Cylinder	472
11.7.2	Rankine Oval	475
11.7.3	Wedge	478
11.7.4	Stagnation Point	480
11.7.5	The Method of Images	482
11.8	Airfoil Flow	487
11.8.1	The Kutta Condition	487
11.8.2	Source and Vortex Sheets	488
11.8.3	Linear Airfoil Theory	491
11.9	Computational Fluid Dynamics	495
11.9.1	Discretization Approximations	497
11.9.2	Relaxation Methods	500
11.9.3	Flow Past a Vertical Plate	501
11.9.4	Solution Convergence and Grid Sensitivity	503
11.9.5	Richardson Extrapolation	504
11.9.6	Grid Convergence Index	506
	Problems	508
12	Viscous Effects	525
12.1	Molecular Transport of Momentum	526
12.2	Kinematics of a Fluid Particle	529
12.2.1	Basic Formulation	529
12.2.2	Volume Distortion	531
12.2.3	Angular Distortion and Rotation	532
12.2.4	Strain-Rate Tensor and Vorticity Vector	533
12.2.5	Incompressibility and Irrotationality	535
12.3	The Viscous Stress Tensor	538
12.4	Integral Form of the Momentum Equation	542
12.4.1	Derivation	542
12.4.2	Control-Volume Example	543
12.5	Navier's Equation	546
12.5.1	Derivation	546
12.5.2	Symmetry of the Stress Tensor	549
12.5.3	Understanding Surface-Force Balances	550
12.6	Stokes' Postulate	552
12.7	Navier-Stokes Equation	555
12.8	The Vorticity Equation	557

12.8.1	Interaction With Forces on a Fluid Particle	558
12.8.2	Vortex Stretching	558
12.9	Computational Fluid Dynamics	561
12.9.1	Explicit Time-Marching Methods	562
12.9.2	von Neumann Stability Analysis	563
12.9.3	MacCormack's Method	565
12.9.4	Flow Over a Plate with Uniform Suction	567
	Problems	573
13	Navier-Stokes Solutions	583
13.1	Couette Flow	584
13.2	Channel Flow	589
13.3	Pipe Flow	592
13.4	Stokes' First Problem	600
13.5	Stokes' Second Problem	608
13.6	Stagnation-Point Flow	611
13.7	Computational Fluid Dynamics	618
13.7.1	Implicit Time-Marching Methods	618
13.7.2	Crank-Nicolson Method	619
13.7.3	Thomas' Algorithm	621
13.7.4	Stagnation-Point Flow Revisited	623
	Problems	626
14	Boundary Layers	639
14.1	Importance of Friction	640
14.2	Prandtl's Boundary Layer	643
14.2.1	High Reynolds Number Flow Near a Surface	644
14.2.2	Boundary-Layer Equations	645
14.2.3	Momentum-Integral Equation	651
14.2.4	Blasius Solution	656
14.2.5	Effects of Pressure Gradient	659
14.2.6	Boundary-Layer Separation	664
14.3	Turbulence	668
14.3.1	Laminar, Transitional and Turbulent Flow	668
14.3.2	General Properties of Turbulence	673
14.3.3	Reynolds Averaging	676
14.3.4	Reynolds-Averaged Equations	677
14.3.5	Turbulent Boundary-Layer Structure	679
14.3.6	Prandtl's Mixing-Length Hypothesis	685
14.3.7	Modern Turbulence Theories	688
14.4	Computational Fluid Dynamics	692
14.4.1	Parabolic Marching Methods	692
14.4.2	Stretched Finite-Difference Grids	692
14.4.3	Blottner's Variable-Grid Method	696
14.4.4	Predicting Separation on a Rankine Oval	698
	Problems	702

15 Viscous and 2-D Compressible Flow	725
15.1 The Energy Equation	726
15.1.1 Integral Form	726
15.1.2 Constitutive Relation for the Heat-Flux Vector	727
15.1.3 Differential Form	728
15.1.4 Entropy Generation Revisited	732
15.1.5 Surface Boundary Conditions	732
15.2 Fanno Flow	735
15.2.1 Fanno-Flow Equations	735
15.2.2 Solution of the Fanno-Flow Equations	738
15.2.3 Subsonic Inlet	739
15.2.4 Supersonic Inlet	741
15.2.5 Mollier Diagram	743
15.3 Rayleigh Flow	745
15.3.1 Rayleigh-Flow Equations	745
15.3.2 Solution of the Rayleigh-Flow Equations	746
15.3.3 Subsonic Inlet With Heating	746
15.3.4 Supersonic Inlet With Heating	748
15.3.5 Mollier Diagram	749
15.4 Oblique Shock Waves	751
15.4.1 Oblique-Shock Relations	752
15.4.2 Attached and Detached Shocks	758
15.4.3 Shock Reflecting from a Solid Boundary	761
15.5 Prandtl-Meyer Expansion	762
15.5.1 Prandtl-Meyer Function	763
15.5.2 Shock Reflecting from a Solid Boundary Revisited	765
15.5.3 Supersonic Flow Past an Airfoil	766
15.6 Compressible Boundary Layers	769
15.6.1 Laminar Flow	770
15.6.2 Turbulent Flow	771
15.6.3 Compressible Law of the Wall	774
15.7 Computational Fluid Dynamics	776
15.7.1 Conservative Differencing	776
15.7.2 Numerical Dissipation and Dispersion	778
15.7.3 Propagating Shocks and Expansions	780
Problems	782
A Fluid Properties	797
A.1 Perfect-Gas Properties	797
A.2 Pressure	797
A.3 Density	798
A.4 Compressibility and Speed of Sound	799
A.5 Surface Tension	799
A.6 Viscosity	800
A.7 Vapor Pressure	801

B	Compressible Flow Tables	803
B.1	Isentropic Flow and Normal-Shock Relations	803
B.2	Prandtl-Meyer Function and Mach Angle	809
B.3	Fanno Flow	811
B.4	Rayleigh Flow	814
C	Vector Differential Operator ∇	817
C.1	Definition of ∇	817
C.2	Gradient, Divergence and Curl	817
C.3	Directional Derivative	818
C.4	Operations and Identities	818
D	Equations of Motion in Various Coordinate Systems	819
D.1	Rectangular Cartesian Coordinates	820
D.2	Cylindrical Polar Coordinates	821
D.3	Spherical Coordinates	822
D.4	Rotating Coordinate System	823
D.5	Natural (Streamline) Coordinates	824
E	Companion Software	827
	Answers to Selected Problems	829
	Bibliography	839
	Index	845
