Index of Home Experiments	xiii
Notation	xv
Preface	xxi
1 Introduction	1
1.1 Dimensions and Units	5
1.1.1 Independent Dimensions	5
1.1.2 Common Systems of Units	5
1.1.3 Converting Dimensional Quantities	9
1.2 Definition of a Fluid	12
1.2.1 Simplistic Definition of a Fluid	12
1.2.2 Rigorous Definition of a Fluid	12
1.3 Continuum Approximation	13
1.4 Microscopic and Macroscopic Views	15
1.4.1 Density	15
1.4.2 Temperature	17
1.4.3 Pressure	17
1.4.4 Vapor Pressure	18
1.5 Thermodynamic Properties of Gases	20
1.6 Compressibility	21
1.7 Surface Tension	23
1.8 Viscosity	27
1.9 Examples of Viscosity-Dominated Flows	29
1.9.1 Couette Flow	29
1.9.2 Hagen-Poiseuille Flow	31
1.10 Fluid-Flow Regimes	32
1.11 Brief History of Fluid Mechanics	33
Problems	35
2 Dimensional Analysis	45
2.1 Basic Premises	46
2.2 Buckingham II Theorem	49
2.2.1 Finding Dimensionless Groupings	49
2.2.2 Interpretation of Results	54
2.2.3 Nonuniqueness of Results	57
2.2.4 E. S. Taylor's Method	58

2.3	Common Dimensionless Groupings	60
2.4	Dynamic Similitude	61
2.4.1	Similitude for an Airplane	62
2.4.2	Similitude for a Ship	64
	Problems	66
3	Pressure	81
3.1	Pressure on an Infinitesimal Element	82
3.2	The Hydrostatic Relation	84
3.3	Atmospheric Pressure Variation	86
3.4	Manometry	89
3.5	Bernoulli's Equation	91
3.6	Velocity-Measurement Techniques	94
3.6.1	Stagnation Points	94
3.6.2	Pitot Tube	94
3.6.3	Pitot-Static Tube	96
3.7	Hydrostatic Forces on Plane Surfaces	97
3.8	Hydrostatic Forces on Curved Surfaces	106
3.9	Equivalent Pressure Fields and Superposition	110
3.10	Buoyancy	112
	Problems	114
4	Kinematics	133
4.1	Eulerian Versus Lagrangian Description	133
4.2	Steady and Unsteady Flows	139
4.3	Vorticity and Circulation	140
4.4	Streamlines, Streaklines and Pathlines	145
4.5	Extensive and Intensive Properties	148
4.6	Surface Fluxes	149
4.7	Reynolds Transport Theorem	151
4.8	Vector Calculus and Multiple Integrals	156
	Problems	158
5	Conservation of Mass and Momentum: Integral Form	169
5.1	Control-Volume Method	169
5.2	Conservation of Mass	171
5.3	Conservation of Momentum	172
5.4	Preliminaries	173
5.4.1	Overview of the Method	174
5.4.2	Useful Control-Volume Theorem	177
5.4.3	Fluid Statics Revisited	178
5.5	Mass Conservation Applications	179
5.5.1	Steady Flow in a Pipe	180
5.5.2	Sphere Falling in a Cylinder	182
5.5.3	Deforming Control Volume	186
5.6	Mass and Momentum Conservation Applications	188
5.6.1	Channel Flow With Suction	188
5.6.2	Indirect Force Computation—Rotational Flow	191
5.6.3	Indirect Force Computation—Irrotational Flow	194

5.6.4	Reaction Forces	196
5.6.5	Nonuniform Cross-Sectional Velocity Profiles	198
5.7	Accelerating Control Volume	200
5.7.1	Inertial and Noninertial Coordinate Frames	200
5.7.2	Ascending Rocket	202
	Problems	206
6	Conservation of Energy: Integral Form	233
6.1	Thermodynamics	234
6.1.1	Fundamental Concepts	234
6.1.2	The First Law of Thermodynamics	237
6.1.3	The Second Law of Thermodynamics	237
6.1.4	Combined First and Second Laws	238
6.1.5	The First Law for a Moving Fluid	240
6.2	Integral Form of the Energy Equation	240
6.3	Approximate Form of the Energy Equation	244
6.4	Flow in Pipes	248
6.4.1	Friction and Head Loss in Straight Pipes	249
6.4.2	Minor Losses and Non-Circular Cross Sections	254
6.4.3	Multiple-Pipe Systems	262
6.5	Open-Channel Flow	265
6.5.1	Uniform Flow	269
6.5.2	The Equations of Chézy and Manning	271
6.5.3	Surface Wave Speed and Flow Classification	273
6.5.4	Specific Energy	278
6.5.5	Hydraulic Jump	281
	Problems	283
7	Turbomachinery	301
7.1	Classification	301
7.2	Conservation of Angular Momentum	303
7.2.1	Derivation	303
7.2.2	Lawn Sprinkler	304
7.3	The Euler Turbomachine Equations	306
7.4	Application to a Centrifugal Pump	310
7.4.1	Velocity Triangles	310
7.4.2	Computing Pump Properties	314
7.4.3	Efficiency	316
7.4.4	Performance Curves	316
7.5	Dimensional Considerations	317
7.5.1	Primary Dimensionless Groupings	317
7.5.2	Specific Speed	320
7.6	Common Turbomachines	320
7.6.1	Pumps and Compressors	320
7.6.2	Reaction and Impulse Turbines	322
	Problems	326

8	One-Dimensional Compressible Flow	333
8.1	Classification	334
8.2	Thermodynamic Properties of Air	335
8.3	Speed of Sound	336
8.4	Subsonic Versus Supersonic Flow	339
8.5	Analysis of a Streamtube	340
8.6	Total Conditions	344
8.7	Normal Shock Waves	346
8.8	Directionality	348
8.9	Laval Nozzle	350
8.10	Fanno Flow	355
8.10.1	Fanno-Flow Equations	356
8.10.2	Solution of the Fanno-Flow Equations	358
8.10.3	Subsonic Inlet	360
8.10.4	Supersonic Inlet	361
8.10.5	Mollier Diagram	362
8.11	Rayleigh Flow	363
8.11.1	Rayleigh-Flow Equations	364
8.11.2	Solution of the Rayleigh-Flow Equations	364
8.11.3	Subsonic Inlet With Heating	365
8.11.4	Supersonic Inlet With Heating	366
8.11.5	Mollier Diagram	367
	Problems	370
9	Conservation Laws: Differential Form	383
9.1	Reynolds Transport Theorem Revisited	384
9.2	Conservation of Mass	386
9.3	Conservation of Momentum	387
9.4	Conservation of Energy	388
9.5	Summary of the Conservation Equations	389
9.6	Mass Conservation for Incompressible Flows	390
9.7	Euler's Equation	391
9.7.1	Rotating Tank	393
9.7.2	Galilean Invariance of Euler's equation	395
9.8	Entropy Generation	397
9.9	Derivation of Bernoulli's Equation	398
9.10	Bernoulli's Equation and Energy Conservation	401
9.10.1	Flow of a Liquid	401
9.10.2	Flow of a Gas	401
	Problems	404
10	Potential Flow	413
10.1	Differential Equations of Motion	414
10.2	Mathematical Foundation	414
10.2.1	Cylindrical Coordinates	415
10.2.2	Velocity-Potential Representation	416
10.2.3	Streamfunction Representation	417
10.3	Streamlines and Equipotential Lines	418
10.4	Bernoulli's Equation	420

10.5	Fundamental Solutions	421
10.5.1	Uniform Flow	422
10.5.2	Potential Vortex	423
10.5.3	Source and Sink	424
10.5.4	Doublet	426
10.5.5	Comments on Use of Fundamental Solutions	428
10.6	Flow Past a Cylinder	430
10.6.1	The Basic Solution	430
10.6.2	Force on the Cylinder	433
10.6.3	Adding a Vortex	435
10.6.4	Force Computation Redone	437
10.7	Other Interesting Solutions	442
10.7.1	Accelerating Cylinder	442
10.7.2	Rankine Oval	444
10.7.3	Wedge	446
10.7.4	Stagnation Point	448
10.7.5	The Method of Images	450
	Problems	454
11	Vorticity, Viscosity, Lift and Drag	465
11.1	The Vortex Force	466
11.2	Helmholtz's Theorem and d'Alembert's Paradox	467
11.3	Boundary Conditions at a Solid Boundary	469
11.4	Viscous Effects and Vorticity Generation	470
11.5	Navier-Stokes Equation and Diffusion of Vorticity	473
11.6	Prandtl's Boundary Layer	473
11.6.1	High-Reynolds-Number Flow Near a Surface	474
11.6.2	Boundary-Layer Equations	475
11.6.3	Momentum-Integral Equation	481
11.6.4	Blasius Solution	486
11.6.5	Effects of Pressure Gradient	490
11.6.6	Boundary-Layer Separation	493
11.7	Turbulence	495
11.7.1	Laminar, Transitional and Turbulent Flow	496
11.8	Lift and Drag of Common Objects	500
	Problems	506
A	Fluid Properties	519
A.1	Perfect-Gas Properties	519
A.2	Pressure	519
A.3	Density	520
A.4	Compressibility and Speed of Sound	521
A.5	Surface Tension	521
A.6	Viscosity	522
A.7	Vapor Pressure	523

B Compressible Flow Tables	525
B.1 Isentropic-Flow and Normal-Shock Relations	525
B.2 Fanno Flow	531
B.3 Rayleigh Flow	534
C Vector Differential Operator ∇	537
C.1 Definition of ∇	537
C.2 Gradient, Divergence and Curl	537
C.3 Directional Derivative	538
C.4 Operations and Identities	538
D Equations of Motion in Various Coordinate Systems	539
D.1 Rectangular Cartesian Coordinates	540
D.2 Cylindrical Polar Coordinates	541
D.3 Spherical Coordinates	542
D.4 Rotating Coordinate System	543
D.5 Natural (Streamline) Coordinates	544
Answers to Selected Problems	547
Bibliography	555
Index	559
